FOR PATENT UNDER 37 CFR 1.322

Sir:

Upon comparison of U.S. Patent No. 6,834,159 with our file of the application therefore, the following errors by the Patent and Trademark Office were found:

The following claims were misprinted and should read as follows:

1. An aircraft heated floor panel, comprising:

a plurality of layers cured together to form a lower support level and an upper heater level;

a metal face sheet for protecting the top of the panel from floor-traffic related damage; and

a pressure sensitive adhesive bonding the metal face sheet to the underlying support/heater layers;

wherein the pressure sensitive adhesive retains elasticity after bonding and performs during elevated curing temperatures in excess of about 250° F.

16. An aircraft heated floor panel, comprising:

a plurality of layers cured together to form a lower support level and an upper heater level, these support/heater layers together having a certain rate of thermal expansion;

JUN 0 8 2005

a face sheet for protecting the top of the panel from floor-traffic related damage, the face sheet having a different rate of thermal expansion than the underlying support/heater layers; and

an elastic adhesive bonding the face sheet to the underlying support/heater layers whereby the different rates of thermal expansion may be accommodated during curing procedures;

wherein the adhesive performs during elevated curing temperatures in excess of about 250° F.
